Geometry

Working, Survival & Test Conditions

Nominal or Gauge Thickness

LEVEL 1 - COMPONENT CODE CHECK

ASME B31.3
Ch. II and IX

ASME BPVC Sec.
VIII Div. 1 & Div. 2

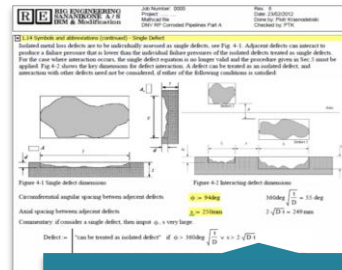

DNV Rules for
Piping

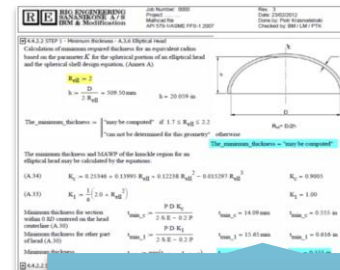

API Specifications
for Drilling Systems

LEVEL 2 - CORRODED COMPONENT EMPIRICAL EVALUATION

DNV-RP-F101

API 579-1/ASME
FFS-1

ASME B31G

LEVEL 3 - SYSTEM EVALUATION (FEA ASSESSMENT METHOD)

Bentley AutoPIPE

Algor PipePak

Autodesk Robot
Structural Analysis

Autodesk Mechanical
Simulation

RIG ENGINEERING ASSESSMENT

LEVEL 1 - COMPONENT CODE CHECK

A. ASME B31.3 Process Piping

- Chapter II Design (*for ordinary service piping*)
- Chapter IX High Pressure Piping
- Straight pipe and pipe bends design check
- Software: *Mathcad calculators prepared by RE*
- Pipe standard ASME B16.5/B16.47 flange and non-standard flange stress analysis and leakage check for internal pressure and external loading, if prescribed
- Software: *Codeware Compress www.codeware.com*

B. ASME Boiler & Pressure Vessel Code, Section VIII Division 1 and Division 2 Part 4 Design by Rules (DBR)

- Air Pressure Vessel (APV) and Mud Gas Separator (MGS) vessel types and Bulk Tanks
- Vessel body / opening / nozzle flange stress analysis and leakage check using Div. 1 App. 2 and/or Div. 2 Part 4 (DBR) for internal pressure and external loading, if prescribed
- Vessel nozzles and supports
- Software: *Codeware Compress www.codeware.com*

C. DNV Rules for Piping

- Design reference: DNV-OS-E101 Drilling Plant, DNV-RP-D101 Structural Analysis of Piping System
- Software: *Mathcad calculators prepared by RE* and Level 3 software (see page 3 for details)
- Design reference: DNV-OS-D101 Marine and Machinery Systems and Equipment
- Equivalent von Mises Stress Theory
- Software: *Mathcad calculators prepared by RE*

D. API Specifications for Drilling Systems (API Spec. 6A, API TR 6AF, API TR 6AF2, API Spec. 16C)

- API flange stress analysis and leakage check using ASME BPVC Sec. VIII Div. 2 Part 4 (DBR) for internal pressure and external loading, if prescribed
- Software: *Codeware Compress www.codeware.com*
- Advanced FEA assessment of API flanges (e.g. 6BX or 17SV) using ASME BPVC Sec. VIII Div. 2 Part 5 Design by Analysis (DBA) and/or von Mises Stress Method
- Software: *Autodesk Mechanical Simulation www.autodesk.com/simulation-mechanical*

LEVEL 2 - CORRODED COMPONENT EVALUATION

A. Recommended Practice DNV-RP-F101 Corroded Pipelines (for cylinders)

- Part A - Load Resistance Factor Design (LRFD). *Advanced analysis reflecting probabilistic approach (partial safety factors): safety class level, inspection method, confidence level, standard deviation calculation*
- Part B - Allowable Stress Design (ASD). *Simple analysis with a global usage factor*
- Assessment scope: *carbon steel not exceeding API X80 grade, no cyclic loads and sharp defects (cracks), thickness not more than 40 mm, not recommended when fracture is likely to occur*
- Software: *Mathcad calculators prepared by RE*

B. Recommended Practice API 579-1/ASME Fitness-For-Service-1 (for heads and cylinders)

- Part 4 - Assessment of General Metal Loss
- Assessment scope: *pipelines and vessels designed in accordance with ASME B31 and BPVC Sec. VIII Div. 1, corrosion loss only*
- Software: *Mathcad calculators prepared by RE*

C. Manual for Determining the Remaining Strength of Corroded Pipelines ASME B31G

- Supplement to ASME B31 Pressure Piping
- Assessment for corroded thickness between 10 to 80% of original thickness

RIG ENGINEERING ASSESSMENT

LEVEL 3 - SYSTEM EVALUATION

Finite Element Analysis (FEA) of entire piping or pressure-containing system

- Piping resistance and flexibility analysis in accordance with ASME B31.3
- Software: *Bentley AutoPIPE* www.bentley.com/products/autopipe and *Algor PipePak* www.algor.com/products/algorPipePak
- Structural analysis of pressure vessels and pressure-containing equipment (e.g. non-standard elements, valve bodies) in accordance with ASME BPVC Sec. VIII Div. 2 Part 5 Design by Analysis (DBA) and/or von Mises Stress Method
- Software: *Autodesk Robot Structural Analysis* www.autodesk.com/robot-structural-analysis-professional and *Autodesk Mechanical Simulation* www.autodesk.com/simulation-mechanical

BENEFITS:

- Fitness for Service (FFS) approach for Maintenance/Shut down
- Remaining strength assessment
- Acceptance criteria determining minimum safe wall thickness or Maximum Allowable Operating Pressure (MAOP) (also known as Maximum Allowable Working Pressure - MAWP)
- Components (straight pipe, pipe bends, pipe flanges, vessel cylinder, dome ends, body flanges and opening closures, nozzles and supports) or entire system evaluation (pressure piping, vessels and equipment)
- Thorough assessment of piping and vessels – Finite Element Analysis (FEA) including offshore specific load conditions
